

Water Recycling Program Implementation

WCC Aeronautical and Technological College Inc. upholds sustainable water management through its Rainwater Harvesting Program. Water drums placed near the gym collect rooftop runoff, efficiently capturing rainwater during storms. The harvested water is used by the Housekeeping Department for cleaning, the Motorpool Department for vehicle washing, and the Utility Department for irrigation. These practices reduce dependence on municipal water and lower operational costs while conserving potable water. The program is reinforced by institutional policies such as the Mandatory Implementation and Maintenance of Rooftop Rainwater Harvesting (RTRWH) System), Mandatory Water-Saving Design Standards for All New Construction and Major Renovations, and the Campus Water Reuse Awareness Policy.

YEAR	NO. OF WATER RECYCLING PROGRAM IMPLEMENTATION
